S10c transport protein ZnT-1 - rat

N;Alternate names: zinc transporter ZnT-1

C;Species: Rattus norvegicus (Norway rat)
C;Date: 15-Jul-1995 #sequence_revision 01-Sep-1995 #text_change 05-Nov-1999
C;Accession: $54303
R;Palmiter, R.D.; Findley, S.D.
EMBO J. 14, 639-649, 1995
A;Title: Cloning and functional characterization of a mammalian zinc transporte A;Reterence number: $54302; MUID:95188868; PMID:7882967
A;Accession: $54303
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-507 <PAL>
A;Cross-references: EMBL:U17133; NID:9577842; PIDN:AAA79234.1; PID:9577843

Polynucleotides and polypeptides of the invention are useful for treating a disease or condition mediated by human transporter protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression of the gene encoding the transporter protein. The gene of the invention has been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The gene has been localised to human chromosome 1. The current sequence represents the human transporter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human transporter proteins, related to zinc transporter subfamily, useful as model for developing human therapeutic targets serves as target for human therapeutics -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1(a); Fig 2; 75pp; English.

                                                                                                                                                                                                                                                      cirrhosis, hepatitis, psoriasis and cancers. TRICH DNA is used gene therapy. TRICH DNA is useful for creating knockin humanisc animals (pigs) or transgenic animals (nice or rats) to model hu disease. The present sequence is human TRICH protein.
                                                                                                                                                                                                                                                                                                                                                      treatment of transport disorder e.g. diabetes mellitus, angina, Alzhelmer's disease; neurological disorder e.g. epilepsy, stroke, Huntington's disease, bacterial and viral meningitis, muscle disorder e.g. myocarditis, infectious myositis, arrhythmias, asthma, immunological disorder e.g. acquired immunodeficiency syndrome (AIDS), allergies, atherosclerosis; and cell proliferative disorders e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of functional TRICH and composition comprising TRICH antagonist is useful for treating a disease or condition associated with TRICH overexpression of TRICH. TRICH sequence is used in the diagnosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          useful as an immunogen for preparing antibodies which are useful for diagnosing a condition of disease associated with its expression in a subject, and for detecting and purifying it from a sample. TRICH DNA is useful as probe or a primer for assessing toxicity of a test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human transporters and ion channels (TRICH) and their corresponding nucleic acid sequences. TRICH is useful for screening an agonist/antagonist that modulates its activity. TRICH is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides of human transporters and ion channels, useful diagnosing, treating or preventing transport, neurological, immunological and cell proliferative disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-SEP-2001

condition mediated by human transporter protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression

The invention relates to an isolated human transporter protein that related to the zinc transporter subfamily. Polynucleotides and polypeptides of the invention are useful for treating a disease or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of the gene encoding the transporter protein. The gene of the invention has been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The current sequence represents a rat amino acid sequence that is relative to the transporter protein of the invention.

The invention relates to an isolated NOVX polypeptide selected from CC NOVIA, NOVIA, NOVIAC, NOVZA, The mature form or variant.

CC Also included are a nucleic acid encoding a NOVX protein or variant.

CC Also included are a nucleic acid encoding a NOVX protein or variant.

CC a vector comprising the nucleic acid, cell comprising the vector;

CC an anti-NOVX antibody; and identifying agents that modulate the comprision of the compri

Also included are a nucleic acid encoding a NOVX protein or variant; a vector comprising the nucleic acid; a cell comprising the vector; an anti-NOVX antibody; and identifying agents that modulate the expression or activity of NOVX. NOVX, the nucleic acid, antibody and modulators are useful in the diagnosis, treatment or prevention of developmental disorders, endocrine disorders, vascular disorders,
                                                                                                            hypertension, arteriosclerosis, ischaemia, haemolytic anaemia, Werner syndrome, rheumatoid arthritis, Grave's disease, wound healing, X-linked mental retardation, psychotic and neurological disorders and neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 20; 210pp; English

This invention relates to the DNA and protein sequences of novel CC isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 CC or 84234 proteins. The method of the invention is useful for treating a CC disorder characterised by aberrant activity of 47476, 67210, 49875, CC 46842, 33201, 83378, 84233, 64708, 85041 or 84234-expressing cell in a CC subject. The protein molecules can act as novel diagnostic targets and CC therapeutic agents for controlling aberrant or deficient signal CC transduction resulting, in e.g., haematopoeitic disorders, including CC blood clotting disorders, autoimmune disorders, or disorders related to abnormal cellular proliferation or CC an inability to clear infections (e.g., viral or bacterial infections), CC as well as disorders related to abnormal cellular proliferation or CC disorders of metabolic imbalance (e.g., disorders of lipopolysaccharide biosynthesis or glycogen synthesis) immunological disorders, cellular CC cardiovascular disorders, neurological disorders, or cellular CC mothility and adhesion disorders disorders, e.g., cancer, cell disorders, viral diseases, neurological disorders (e.g., brain CC disorders, pain or metabolic disorders, liver disorders, kidney CC disorders, protein trafficking disorders and disorders associated with bone metabolism. The sequences of the invention are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-NOV-2000;

The invention also relates to compositions and methods for the diagnosis, prevention and therapy of cancer, particularly pancreatic cancer. Sequences of the invention are used in gene therapy and in vaccines. The present sequence is human pancreatic tumour full-length protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC cancer associated transcript in a cell from a patient. The method CC comprises contacting a biological sample from the patient with CC prostate cancer associated polynucleotides (designated PC genes) that CC selectively hybridise to a sequence that is at least 80% identical CC to them. The prostate cancer associated polynucleotide sequences CC are differentially expressed in prostate tumour tissue or in CC prostate cancer and are derived from the tissues of various CC organisms such as humans or other mammals (e.g. mice, sheep and dogs). CC The methods of the invention are useful for diagnosing and treating CC prostate cancer in mammals. The prostate cancer associated genes are CC useful for diagnosing or treating prostate cancer, as well as for CC identifying modulators of prostate cancer or agents that inhibit CC prostate cancer. The nucleic acid sequences are particularly useful CC in gene therapy, as a vaccine or in antisense applications.

ABG61800-ABG61944 represent prostate cancer-associated proteins.
